

**Dr. István MÓGA** civil/structural engineer, MBA

**Dr. Péter GÓSI** mechanical engineer

## **Method of aging management for civil engineering and an application**

It is an important job for NPP Paks in the preparation of the extension of its operating life to assure and verify the safe operation of the system, the structure and the components afterwards.

The area of civil engineering survey is to assure the condition of the buildings, their structures and components, the planning of required technical actions.

The expert work covers the investigation of today's maintenance practice and elaborating of new survey programs that are based on international standpoints. The survey and elaborating of new programs are based on international practice, primarily used in the USA, taking domestic characteristics into consideration.

We show shortly in our article the problems of survey's special fields considering the area of ETV-Eóterv Zrt. contractor's field and the connected work of VEIKI's and ÉMI's.
